### **About HIV AIDS :**

HIV, or Human Immunodeficiency Virus, weakens your immune system by destroying important cells that fight disease and infection. Over time, HIV can destroy so many of your T-cells or CD4 cells, a key part of your immune system, that your body can't fight infections and disease anymore. When this happens, HIV infection can lead to AIDS.

AIDS, or Acquired Immunodeficiency Syndrome, is a complex illness with a wide range of complications and symptoms. AIDS is the final stage of HIV. When individuals reach this stage, they are at high risk for opportunistic infections due to their badly damaged immune system.

### **Importance of Awareness and What the Cadets learnt :**

- ♣ Increased awareness of safe practices to prevent HIV infection resulted in cadets being more careful and ultimately decreases infection rates.
- ♣ HIV/AIDS Awareness programmes helped the cadets become more aware of the levels of care and treatment, whether they are living with HIV or caring for someone with this disease.
- ♣ These programmes helped the cadets to understand how the infected person should live with HIV/AIDS and make a positive contribution towards society.
- ♣ It helped the cadets understand how to work together with HIV infected people, as a unit and not to stereo type or discriminate against those. These programmes help everyone to understand the disease, to boost staff morale and create better relationships.

The programme was guided by our NCC Caretaker Dr.Rashmi Gupta .
